Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20, 23 and 29-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Pettinaroli et al. (6,668,643) (hereinafter Pettinaroli).

Pettinaroli teaches a flow sensor including all the features as claimed including a light emitter (18), a light detector (19), a member (24) placed in the flow path between the emitter and the detector, the member opening upon the flow through the flow path such that the light from the emitter is detected by the detector, the member closing upon the low pressure condition in the flow path such that not as much light from the emitter is detected by the detector. The light emitter is a light emitting diode and the detector is the infrared receiving diode. The member is spring biased using a spring (26). The emitter and the detector are housed in a housing.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 21, 22, 24-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pettinaroli.

Art Unit: 2855

Pettinaroli teaches all the features of the instant invention except for the first and second fluid flow state being either an alarm or non-alarm state. It would be obvious to a skilled person at the time the invention was made to modify the device of Pettinaroli using an alarm connected to the system since such modifications would provide security in case the flow has stopped or any other accident may have happened.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harshad Patel whose telephone number is (571) 272-2187. The examiner can normally be reached on Monday-Thursday (6:30 AM-5:00 PM).
